Q1

The link to my website: `https://saarang-react-heroku.herokuapp.com/`

Q2

A student of the electrical department of 2019 batch. Passionate at programming and interested in network programming. I believe that in joining the team it will be able to provide a solid foothold in my quest to learn more about the operations and protocols of the internet and understand more about network security. Working on the app was really an eye opener, made me realise that there is so much going on the front end of a website alone, makes it very exciting to venture the worlds of API's and of the back-end server.

I am a sports enthusiast, love playing the game of football.

Q3

Would love to work on the integration of the front end and back end(Basically APIs) and how the server is tied up with the central database to provide/verify the required data.

Q4

I would certainly dedicate enough time required for the task at hand. But if a definitive answer is required, I could possibly devote 8-10 hours at the very least.
